Supervisory Patent Examiner, Art Unit 1618

Jagadishwar R Samala

Examiner Art Unit: 1618 Α

Continuation of 11, does NOT place the application in condition for allowance because: Contrary to applicant assertion that O'Byme reference has brought as new reference and herefore the rejection is, in essence, a new ground of rejection is assertion is found not persuasive for the following reasons; Applicant rebuttal that COPD dose not encompasses treatment of cystic fibrosis necessitated the evidence by O'Byme which is solely used to show that COPD encompasses cystic fibrosis. Specifically as taught by O'Byme (page 547), it known in the art that small airway disease involve an appearance and increase in number of goblet cells, an increase in the amount of mucus in the lumen, the presence of inflammation, an increase in muscle mass in the walls of the bronchiolean, ultimately, fibrosis. The diseases of cystic fibrosis and COPD are characterized by mucus-congested airways. Agents that stimulate the secretion of CL are anticipated to facilitate mucocillary clearance and thus be of benefit in the treatment of cystic fibrosis and COPD. Thus, this is not a new grounds of rejection, rather a reference to support an inherent feature in the original rejection. Note, this reference was only cited as an "evidence dov' citation."

Applicant asserts that Maesen does not teach that tiotropium bromide can be used to treat any specific symptom of COPD-whether associated with COPD or not. This argument is not persussive because, Messen teaches that inhabel totroum bromdie induced bronchodilation in COPD patients. Since COPD encompasses the cystic fibrosis, it would inherently treat cystic fibrosis. Applicant further asserts that Skupin does not teach or suggests a method for treating a clisease selected from cystic fibrosis, idiopathic lung fibrosis and fibrosing alveolitis, the combination of references cannot teach or suggest this element of the claimed invention. This argument is not persuasive because Skupin reference is relied upon for their teachings the use of certain excipients in the treatment of COPD which includes such entities as cystic fibrosis, chronic bronchistis, emphysema, and COPD where it is associated with asthma.
